Profile

Performance-driven Senior Java Developer with 9+ years of experience in designing, developing, and deploying scalable enterprise applications using Java, Spring Boot, Micro services, and AWS. Skilled in full SDLC, from requirement analysis to production support, ensuring high-quality and timely delivery. Proven expertise in micro service architecture, API integration, cloud migration, and DevOps automation. Adept at collaborating with cross-functional teams, optimizing performance, and driving continuous improvement through clean, maintainable code. Strong background in Agile development, system troubleshooting, and mentoring junior developers to enhance productivity and code quality.

Education

- Bachelor of Engineering in Computer Science
  Rajasthan Technical University

Skills

- Languages: Java (8, 11, 17, 21), Java Spring Boot 3.2, SQL
- Testing: JUnit, Mockito (Java),
- Cloud & DevOps: AWS (Lambda, SQS, CloudWatch)
- Frameworks & APIs: Open API 3.0, Swagger Codegen, REST, GraphQL
- Databases: SQL Server
- Message Broker: RabbitMQ
- Monitoring: Grafana
- CI/CD & Tools: Git, Postman, Jira

Career Experience

HCL — July 2022 — Till date

Senior Software Engineer

- Built microservices using Java 17 Spring Boot, acting as RabbitMQ producers & consumers, with Spring Cloud gateway as an API gateway
- Built microservices & deployed on various environments (Dev, Canary, NPE & PROD)
- Implemented JWT-based authentication and integrated OAuth2 for secure communication.
- Containerized applications using Docker and orchestrated deployments through Kubernetes and Jenkins pipelines.

Collabera September 2020— June 2022

Senior Software

- Designed and developed RESTful APIs for billing, user management, and plan configuration using Spring Boot and Hibernate.
- Migrated monolithic modules to microservices, improving performance by 40%.
- Implemented Junit test case for application and achieved Sonar code coverage 90%
- Participated in requirement analysis, and bug fixing cycles.

Wipro October 2019 — June 2020

Software Engineer

- Assisted in developing internal applications for telecom clients using Core Java and Spring Framework.
- Implemented CRUD operations and basic business logic in a multi-tier architecture.
- Supported integration testing and documentation.

Aricent February 2016 — October 2019

Software Engineer

- Involved in development and testing phases of Software Development Life Cycle SDLC Using Waterfall methodologies.
- Developed managed beans, Data Access Object DAO which handles all database operations.
- Worked closely with the business
- Used GitHub for version control repository across common source code used by developers.
